

## HP Talks About AFTECH Advantage

Advantage from AFTECH is a comprehensive, client/server core processing system designed for credit unions by credit union experts. Advantage is built from the ground up for a credit union's specific needs, providing front-desk and back-office operational flexibility, ease of use, and reliable performance. Users can quickly apply the Advantage interface to access a seamless system of teller, loan, and member service modules, reducing transaction-processing time.

Key features:

- Exceptional Automated Clearing House Network (ACH) warehousing and processing
- A variety of ATM, credit card, and debit card processing options
- A top-notch loan system that includes risk-based lending, online applications, Internet-integrated credit bureau reporting, and credit scoring
- Excellent support for best-of-breed third-party applications that can be integrated through the AFTECH direct application program interface (API)

AFTECH's complete package of network services offers the design and consulting that credit unions need to link to a modern data and information-processing network with teller, loan, and member service functions. Credit Unions that use AFTECH Advantage on reliable, fast, scalable, and flexible HP OpenVMS platforms improve customer service, increase productivity, and keep a competitive edge.
